there: are you trying to install ubuntu, or install ubuntu on a virtual machine? Inx To start your system in text-only mode append 'text' (without the quotes) to the kernel line in the grub menu. You can access the grub menu by pressing Esc (Grub legacy) or Shift (Grub2) during boot. For more info see exit quit bye there: see #7 there: you may also want to run a memtest tomreyn: I did installed ubuntu but can't remember how it got this bad. I have two usb hard drive attached to this computer and this one worked perfectly well. I was trying to install ubuntu on external hard drive I tried to install it with bios and it was not working so I had to remove it and install it again with USB stick and again it worked perfect for some time I restarted and it was bad again I tried running this there: we may need a better description of the configuration you're trying to boot. the last thing I did before this happened was to disable secure boot tomreyn: I have two usb hard drives attached to this computer and this one worked perfectly well. I was trying to install ubuntu on external hard drive. I tried to install it with bios and it was not working so I had to remove it and install it again with USB stick. and again it worked perfect for some time. I restarted and it was bad again. I tried running this I tried booting with bios only and this also did not work. I read that it is because of secure boot so I disabled secure boot there: you booted the system where you 82157476af
